

Los Angeles Basin Section (LABS) Young Professionals Committee

WHO ARE YOUNG PROFESSIONALS?

A Young Professional (YP) is any member or prospective member that considers themselves to be relatively new in the any of the wastewater, water, or stormwater industries. They can be less than 35 years of age, have less than 10 years of experience, or simply be young at heart. YPs can include students, plant operators, engineers, lab analysts, maintenance workers, etc.

OUR MISSION:

To provide training and networking opportunities within the water and wastewater field and among industry professionals while promoting the benefits of being a CWEA member.

The Los Angeles-Glendale Water Reclamation Plant (LAG) began operation in 1976 and processes around 20 million gallons of wastewater per day.

LAG is a satellite plant that was originally built as a "hydraulic relief" plant to decrease sewer flow in the downstream collection system.

The City of Los Angeles and City of Glendale co-own the plant and receive an equal share of the recycled water produced.

Los Angeles-Glendale Water Reclamation Plant (LAG) Tuesday, January 26, 2010 @ 11:00 AM
