***P**lease join us to visit the Burbank Water Reclamation Plant (BWRP), where BWRP and LABS SYPC (California Water Environment Association Los Angeles Basin Section Students & Young Professional Committee) are hosting a facility tour introducing City of Burbank's full scale wastewater treatment and reclamation processes.*

BWRP is a tertiary wastewater treatment plant that currently treats 9 million gallons of sewage per day (MGD). The BWRP was built in 1966 to meet the wastewater and sewer needs of the growing residential population and expanding commercial industries located in the City of Burbank. Originally built to treat 6 MGD, the City upgraded the BWRP to the current 9 MGD in 1971. The plant was upgraded in 2000 to ensure that its meets new stringent regulations raising the quality of the cleaned wastewater it discharges after the treatment process. The plant was upgraded again in 2002 to remove ammonia from the wastewater.
